1967 N.H.R.A. WINTER NATIONALS STOCK ELIMINATOR

Dicronite Lubricants

Attention: Jerry F. Heinz

Gentlemen:

We are pleased to report that ever since we Dicronited our 1960 Pontiac engine, we have noticed an increase in performance in the form of reduced friction. The engine turns over easier and oil temperatures are lower. We have experienced absolutely no break-in scuffing, a common problem in racing engines.

High wear surfaces such as camshaft lobes and rocker arms show no signs of wear after three months of racing.

We heartily recommend the Dicronite process and wouldn't think of building a racing engine without it.

Very truly yours,

Ed Forys
